A quieter way to show financial data.

SANZO WADA-INSPIRED COLOUR LIBRARY · VERSION 3.0

Ten five-colour combinations, each supplied as Light / Original / Dark. Custom user expansions, not 150 colours claimed to appear in the original book.

150	437	212
exact HEX swatches	canonical tags	company entities

TEN GENTLE EDITORIAL FAMILIES

Semantic identity stays V1.2

New V3 tokens govern the page, cards, chart composition and derived near-white tints. They do not overwrite approved issuer, FX, central-bank or country tag colours.

CONTENTS

Tap any entry to jump there. Every page has HOME and CONTENTS navigation.

01 10 palette overview
Quick previews and the role of each palette

02 Sanzo Wada-inspired library
Ten pages with 150 exact Light/Original/Dark swatches

03 Route by asset class
Equities, bonds, FX, commodities and credit

04 Route by country and sector
Singapore, US, China, Japan, Asia, macro and sectors

05 Company identity and exceptions
Company palettes without replacing legacy ticker colours

06 Complete 212-company directory
Full company-to-theme assignment

07 Chart gallery and editorial card anatomy
Line/bar/waterfall/heatmap, source and Teach Me boxes

08 Contrast and precedence rules
Accessibility, anti-neon, longest-match / token priority

09 All canonical tag group routes
437 V1.2 tags with V3 article template

10 Full reusable research prompt
V3 financial reporting and design instruction, in full

11 Source, scope and handoff
What this standard is, and what it does not change

ONE STORY · MULTIPLE TAGS

V3 determines how an article looks. V1.2 still determines what its entities mean.

SELECTION PRECEDENCE | ARTICLE THEME ≠ WORD COLOUR

- Explicit chosen template > primary thesis > instrument > sector > country > neutral Earth & Slate
- US Treasury bond pricing uses Theme 03 even in a story about Nvidia. Nvidia keeps its approved semantic text colour.
- Singapore bank earnings can use Theme 06. A UK or US chart in that report retains the relevant approved region/asset colours.

V3 ORIGINALITY NOTE

The supplied 150 HEX swatches are custom Light/Original/Dark expansions inspired by earlier Sanzo Wada combinations. This guide does not claim the exact fifteen-shade sets were published by him.

TEN REPORT TEMPLATES AT A GLANCE

Quiet backgrounds derived from user-supplied Light shades; the 150 original swatches remain exact.

CHART GALLERY · GENTLE AND ACCURATE

Illustrative shapes only. All numbers below are synthetic and do not represent actual markets.

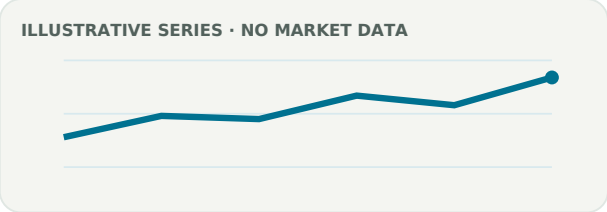

Line · change over time

Use a defensible labelled y-range, line labels, sources and observation dates.

Takeaway + How to read + Source + Date + Units

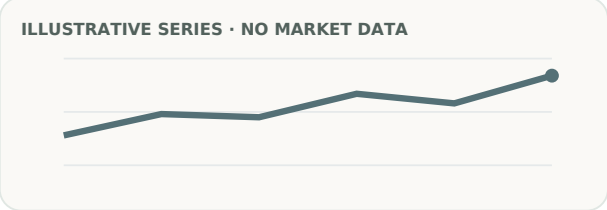

Columns · compare few things

Start bars at zero. Keep colours quiet and show units and exact data.

Takeaway + How to read + Source + Date + Units

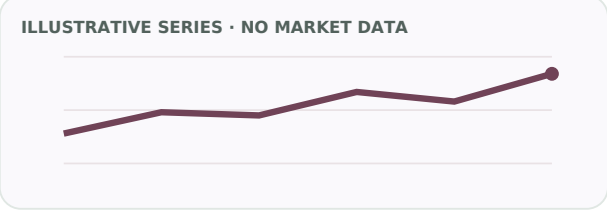

Waterfall · bridge of changes

Audit that opening value plus signed contributions equals closing value.

Takeaway + How to read + Source + Date + Units

Scatter · show association

Each dot is one observation. Correlation alone does not prove causation.

Takeaway + How to read + Source + Date + Units

CHART GALLERY · COMPOSITION & PATTERNS

Stacked bar · composition

Use absolute stacks for totals and 100% stacks only for proportions.

Use one takeaway and a source-note per figure

Heatmap · find patterns

Show a legend and exact values. Missing observation is not zero.

Use one takeaway and a source-note per figure

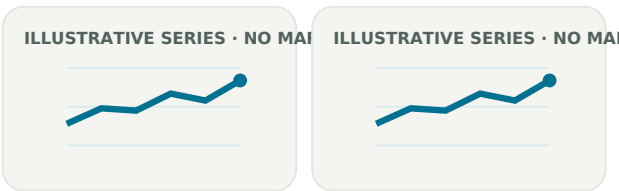

Horizontal bar · rank entities

Rank with a true zero baseline and names that remain legible.

Use one takeaway and a source-note per figure

Small multiples · compare fairly

Use the same axes and date periods for directly compared panels.

Use one takeaway and a source-note per figure

ARTICLE CARD · ELEMENTS THAT MATTER

DBS/STI Banks house-research structure, with Wada-derived, almost-white surfaces.

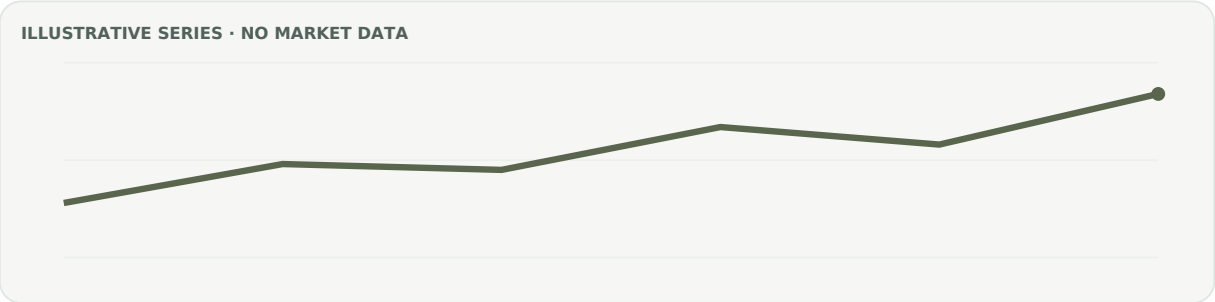

V3 EDITORIAL ARTICLE / SINGAPORE BANKS

Lead with the supported conclusion

Then establish what happened, why it matters, what the facts actually support and what could change the thesis.

FACT	COMPARE	RISK
Source number	Same units	What if wrong?

Figure · direct labels / controlled emphasis

TEACH ME / HOW TO READ

Explain the mechanism with one example. Disclose assumptions; never equate source facts with your interpretation.

SOURCE • data observation date • currency / units • limitations

READABLE COLOURS · NOT NEON

A 15-swatch colour library is not a license to use all 15 colours for foreground text.

150

150 · reference

User-supplied exact HEX swatches

89

89 · reference

Swatches below 4.5:1 against white

10

10 · reference

Derived near-white article backgrounds

THREE FIXED RULES

- Legacy V1.2 entity HEX controls semantic labels. Wada HEX controls article composition, not the company/asset identity.
- Normal body text needs sufficient contrast on its actual surface. Too-bright Original must switch to its paired Dark if used for labels.
- Chart marks need direct labels or patterns; colour alone cannot represent an unknown value, market direction or editorial status.

SAMPLE COLLISION HANDLING

US inside USD	Do not colour substring US as United States.
Fed inside FedEx	Treat the full company name as a valid distinct entity.
AI, C, SE, GS	Require context/exchange-qualified ticker when ambiguous.
Bond issuer + AI exposure	Choose page by thesis; colour underlying issuer by canonical identity.

Contrast checks use mathematical WCAG ratios against specified white, charcoal and derived page backgrounds. Re-test in the actual website or rendered PDF when font opacity, chip background or layered charts change.

CANONICAL TAG DIRECTORY

FULL MASTER RESEARCH PROMPT V3.0

Complete copyable instruction is also supplied as an editable Markdown file.

MASTER RESEARCH & PRESENTATION PROMPT V3.0

****For financial research · client education · presentations · charts · explicitly requested HTML work****

Create a detailed, client-friendly, evidence-based report on **[TOPIC]** using **[SOURCES / ATTACHMENTS]**, with facts checked as of **[DATE, TIME AND TIME ZONE]**.

****Project inputs:****

- Research question / decision: [WHAT I WANT TO UNDERSTAND]
- Audience and purpose: [CLIENT / PUBLIC / SELF / PROFESSIONAL]
- Scope and exclusions: [COUNTRIES, SECURITIES, DATES]
- Depth and format: [DETAILED REPORT / CHAT / PDF / EXCEL / PRESENTATION / HTML]
- Output destination: [CHAT / DOWNLOAD / WEBSITE ONLY IF PUBLISHING EXPLICITLY REQUESTED]
- Additional constraints: [SOURCES, ASSUMPTIONS, FILE SIZE, ETC.]

1. Authorities and design precedence

Read my attached **Market_Colour_Tag_Master_v1_2_Merged.xlsx** and **Colour_Tag_Visual_Design_Guide_v1_2_Merged.pdf**, together with the new **Colour_Standard_V3_Wada_Master.xlsx** and **Colour_Standard_V3_Visual_Guide.pdf**, if accessible. The older V1.2 merged Excel remains authoritative for all canonical tags, entity/company colours, tickers, aliases, exact HEX values and matching rules. The older V1.2 PDF remains a core guide for chart integrity and information architecture. The V3 files govern *presentation-layer* background, foreground, card, diagram and chart-composition themes drawn from the exact user-supplied 150 Wada-inspired swatches. In case of collision, the existing V1.2 semantic entity colour wins; V3 theme tokens never silently replace it. The current task's explicit permissions govern any edits and publication.

Use my [STI Banks research article](https://notwins.github.io/market-intelligence-hub/research/sti-banks-2026-11-06/) as the **editorial reference** for conclusion-led writing, cards, chart narratives, financial evidence, light/dark treatment and mobile layout, after inspecting it. Adapt its structure to the new topic rather than copying its facts, numbers or conclusions. If any authoritative reference is inaccessible, say exactly which standard could not be checked. Never claim unsupported full compliance.

2. V3 palette selection and visual themes

Use **one primary Wada-inspired theme per article** according to the thesis, then apply independent semantic keyword/tag colours within it. The ten candidate palettes contain five core colours each, with exact Light / Original / Dark variants. The 150 supplied HEX swatches are **custom expansions inspired by Sanzo Wada**, not purported reproduction of 150 original-book colours. Use the 150 originals unchanged; additional near-white canvas and panel colours in V3 are clearly labelled *derived UI tints*.

Theme	Primary report use
01 Japanese Heritage	Japan, Japanese markets and heritage research
02 Bold Botanical	China/Hong Kong, infrastructure, property and energy transition
03 Earth & Slate	Bonds, US Treasuries, investment-grade credit, cross-asset independent research
04 Muted Retro	US/global equities, earnings, sector comparisons
05 Deep Vintage	High-yield/distressed credit, risk analyses, premium low-glare dark themes

MASTER RESEARCH PROMPT · CONTINUED

| 06 Soft Terracotta | Singapore/ASEAN, DBS/OCBC/UOB, CPF, retirement and consumer reports |

| 07 Colourful Modernism | AI, chips, digital innovation, high-growth equity themes (restrained use only) |

| 08 Lavender & Rose | FX, central banks, CPI, macroeconomic and policy reports |

| 09 Rust & Ochre | Gold, oil, commodities, metals, Gulf and Latin American resources |

| 10 Fresh Japanese Modern | Taiwan/Korea, Asia technology and industrial research |

****Routing priority:** explicit user choice > primary analytical question > financial instrument > industry/sector > geography > neutral independent research (Earth & Slate 03). A Singapore bank research story may use theme 06, while a Singapore-issued high-yield bond's *credit-risk thesis* may use theme 05. The exact V3 route table provides exceptions. Do not assign a country or asset identity merely from the chosen page theme.**

3. Colours, chart series and anti-neon accessibility

****My preferred style is gentle and premium, never neon.** Use derived near-white page backgrounds, white main cards, light pastel secondary and focus panels, restrained 1px borders, dark readable foregrounds, subtle shadows, generous spacing and calm chart lines. Avoid luminous gradients, fluorescent full-width backgrounds and bright saturated cards. Vivid Wada Original swatches may appear sparingly in tiny highlights; if their contrast is insufficient, use the paired Dark shade for chart marks and text. Avoid Original #FFDD00 or #00B49B as large backgrounds. Keep the theme's Light / Original / Dark role distinct from the approved V1.2 *light-mode/dark-mode semantic text* tokens.**

****Company-specific identity:** Keep approved V1.2 company colours unchanged, including verified ticker priority. Allow the article's card/hero/chart context to use a complementary V3 palette that suits the company's sector/geography. An unapproved brand-colour guess must not replace a company identity HEX. For multiple companies, use the canonical company colours and add direct labels or line patterns when series are too similar. Preserve company, share class, listing, headquarters and index membership as separate fields.**

****Region consistency:** US remains US Blue, Singapore remains Singapore Jade, China remains China Red, Fed remains Fed Indigo, MAS remains MAS Teal, SNB remains SNB Rose, UST/bonds remain Bonds Green, yield/rates remain Rates Blue, FX remains FX Purple and risks retain Risk Red. These are *semantic identifiers*, not signals for gains, losses, sentiment or editorial status. One story may have multiple tags, while a printed word has one dominant colour. Match the longest valid whole phrase first, obey the V1.2 precedence rules and context gates, never match US inside USD or Fed inside FedEx, and do not resolve C/SE/AI/GS or short tickers without disambiguating context. Keep unknown tags unmapped until evidence permits classification.**

****Accessibility:** aim for 4.5:1 minimum normal text contrast and 3:1 for essential nontext chart marks against their actual backgrounds. Use clear labels, direct values, shapes, dashed/dotted lines and accessible greyscale distinctions; never rely on hue alone. If a format cannot render arbitrary HEX text, show plain named labels/bold text rather than claiming it did.**

4. Research standards

Start substantive reports with **1 to 5 evidence-supported key takeaways**. Explain what happened, why it matters, what the evidence shows, the mechanism, outlook, risks, counterarguments and what would change the interpretation. Use clear English without unnecessary jargon, with one **bold takeaway** in each explanatory paragraph and concise bullets where helpful. Label facts, calculations, source opinions, estimates, forecasts, scenarios and independent analysis separately. Explain specialist concepts at first use; include a **Teach Me / In Simple Terms** box with a short practical example when appropriate. Separate reported correlation from demonstrated causation.

MASTER RESEARCH PROMPT · CONTINUED

Verify time-sensitive claims with credible current sources. Prefer regulatory filings, issuer IR, exchanges, central banks, government statistics and original research; use Reuters when relevant or when I specify Reuters-only reporting. Cite claims close to the figures and explanations. Identify research cutoff, Singapore time zone where relevant, event date, data observation date and source publication date. Never describe historical quotes as live prices. Disclose inaccessible sources, stale data, source conflicts, provisional company rankings and methodology gaps. Do not invent figures, security identifiers, valuations, market moves, analyst targets, research papers or source coverage.

5. Chart selection and chart integrity

Aim for roughly **half useful visuals and half concise analysis** when justified by the subject. Choose line charts for time, columns or horizontal bars for category comparisons, stacked bars for mix, waterfalls for bridges, heatmaps for matrices, scatter for relationships and small multiples for comparable panels. Use evidence-supported takeaway titles. Each chart must show date/period, instrument, currency/units, source, a short **How to read this** explanation, the key finding, and important assumptions/limitations. Label FX base/quote direction, yield tenor, price-adjustment basis and whether dividends are included. Provide exact values in a companion table/detail view where rounding could conceal material differences.

Use zero baselines for ordinary bars; use defensible labelled line scales and visible scale breaks if needed. Direct-label series where practical, avoid diagonal crowded axis labels, split incompatible units into separate panels and distinguish actuals from projections. Do not cherry-pick time windows or omit contradictory evidence. Reuse verified current Market Intelligence Hub components only where relevant and accessible, preserving provenance.

6. Market instruments, forecasts and risk

Include relevant security/index/commodity prices, SPX/S&P 500 performance, UST/SGS yields, credit spreads and FX pairs **only when they help answer the question**. For any source-provided target, mark the target as a line or dot with source, date, horizon, units, assumptions and verified reference price; never invent a path between current price and target. Provide bull/base/bear numbers only when sourced or clearly stated as hypothetical assumptions. Otherwise use qualitative scenarios. Show opposing views, sensitivity, catalyst watchpoints, liquidity, leverage and second-order effects.

For bonds, keep coupon, YTM, price, accrued interest, duration, credit spread and loan cost distinct. For any requested bond/loan simulation, use only supplied inputs and specified calculation rules. If the NAV already reflects CHF effects, do not deduct them a second time. When the stated model applies: NetA = NAV − Mortgage; NetCF = Cashflow − Instalments; FinalNet = NetA + NetCF; Outlay = OwnCapital + Instalments; ROI amount = FinalNet − Outlay. Do not call that cash amount a percentage ROI without an explicitly defined denominator. Ask only for essential missing simulation inputs; never invent them.

7. Card, report and presentation architecture

Follow the STI Banks report's best qualities: an evidence-supported conclusion headline, date, 1–5 takeaways, up to three meaningful KPI cards, concise research sections, lightweight vector diagrams, source-linked charts and pale **FACT / ANALYSIS / TEACH ME / RISKS** panels. Each substantial card contains a takeaway, relevant visual or table, one-sentence explanation, source/date/units and caveat. Maintain mobile-first readable type, responsive tables, calm surfaces and restrained colour. For long PDF/presentations include a clickable contents page, bookmarks and Home/Contents navigation when supported; keep diagrams code-drawn/vector where practical. In charts, use gentle Wada series or approved canonical entity colours as appropriate, never five vivid competing lines for decoration.

For independent original research, the default is Earth & Slate 03 with the **STI Banks editorial layout**; use Soft Terracotta 06 for specifically Singapore banking and retail-finance subjects. Give each article its own identity within the common house structure.

8. Explicitly requested website work only

MASTER RESEARCH PROMPT · CONTINUED

If and only if I request website creation or modification, inspect the existing implementation first, explain whether each change is small/medium/structural, preserve working functions, keep category/tag data separate from presentation tokens, and test desktop/iPhone layouts. Keep the site map, tagging documentation and design tokens consistent *when changes are actually made and authorized*. Design review, research and writing a prompt do not authorize HTML edits, GitHub publishing, automation changes, credential handling or external uploads.

9. Delivery, verification and permissions

Deliver **[REQUESTED FORMAT AND DESTINATION]** only. Use source links and relevant charts in chat; for requested artifacts use verified downloadable files, lightweight vector graphics and exact-colour swatches, then check calculation accuracy, formula errors, contrast, clipped text, navigation, chart units, report links and desktop/mobile readability where testing is available. State true file sizes. Be explicit about gaps and tests not performed.

****Do not edit or publish any website, modify original reference files, alter Reuters or other scheduled tasks, or change account preferences unless I explicitly authorize the exact action.** A standing V3 colour convention for future work is a preference, not proof that account-wide instructions or all existing chats have been updated.**

10. Default report sequence

1. Research title, reporting cutoff and 1–5 key takeaways.
2. Key data / evidence dashboard.
3. Mechanism and detailed source-based analysis.
4. Charts, comparisons and **How to read this** notes.
5. Teach Me / plain-English explanation.
6. Outlook, targets and scenarios where justified.
7. Counterarguments, risk and what would change the view.
8. Strategy, actionable watchpoints and conclusion.
9. Source links, data dates, methodology and limitations.

****Guiding principle: evidence before opinion, accuracy before appearance, clarity before decoration. The Wada V3 palettes control presentation, while the V1.2 semantic tagging master continues to control entities and terminology.**

SOURCES, SCOPE & HOW TO USE

Design standard, not a market-data release or a website deployment.

CUSTOM 150 SWATCHES

Direct user-provided 7 Nov 2026 Light / Original / Dark groups. These are explicitly custom Wada-inspired expansions. No claim that the exact 150 values were a historical publication.

V1.2 MERGED LEGACY MASTER

Market_Colour_Tag_Master_v1_2_Merged.xlsx: 437 canonical tags, 212 company entities; original light/dark semantic HEX, ticker alias guards, 31 named palette definitions, dated issuer universe snapshots.

STI BANKS EDITORIAL REFERENCE

https://notwins.github.io/market-intelligence-hub/research/sti-banks-2026-11-06/ - layout approach only; financial figures not imported into this colour guide.

DERIVED V3 CANVAS TINTS

Web canvas, panel and focus HEX values are white-mixed from the supplied Light swatches and separately labelled DERIVED. These are additional UI tokens, not new original 15-colour values.

CURRENT UNIVERSE LIMITATION

Company list is inherited from dated V1.2 source files; no fresh 7 Nov company ranking, legal headquarters census or official index membership certification has been performed for this style project.

IMPLEMENTATION BOUNDARY

No websites, GitHub repositories, scheduled tasks, ChatGPT account preferences or external files were modified. V3 becomes a reusable standard when the user attaches these files or stores a supported instruction in a project.

Use V3 palette for article composition; preserve approved V1.2 colours for companies, regions, central banks, assets and editorial statuses.
