DIVERSIFICATION / ONE-PAGE BRIEF

Don't rely on one investment.

Spread your money across investments with different drivers, so one disappointment has less power over your plans.

Spread the risk. Diversify across businesses, markets and investment types. [1,2]

Check what you really own. Different funds may hold the same companies. [3]

Give each part a job. Balance long-term growth, income and accessible money for upcoming needs. [1,2]

Same finish. A steadier journey.

Illustrative portfolio values | index starts at 100 | no currency

Holding	Start	Period 1	Period 2
All in A	100	120	108
All in B	100	90	108
Initial 50/50 mix	**100**	**105**	**108**

All finish up 8%; the mix has smaller swings in this example. Holding both reduces dependence on either path.

Illustrative only. Source: original report, 6 Nov 2026. Two invented periods with no specified duration; 8% is cumulative, not annualised. Initial 50/50, no rebalancing. Hypothetical total returns before fees and taxes; no borrowing or external cash flows. Not a forecast or recommended allocation.

Keep the limits in view

Diversification can still lose money. Investments can fall together and the mix may trail a concentrated winner. A risky addition can raise overall risk. Currency movements, costs and access restrictions matter. [1-3]

Your next step

Review your portfolio before adding another product. Check repeated exposures, keep upcoming spending accessible and agree a suitable mix and review rule. [1-3]

Research cutoff: 6 Nov 2026, 16:02 SGT. **Summary:** 14 Nov 2026. No live market prices.
